

# Complementary feeding practices among children aged 6- 23 months in different socioeconomic settings of Delhi, India, using updated WHO 2021 IYCF indicators

Dr. Komal Rathi<sup>1</sup>, Dr. G.S. Toteja<sup>2</sup> & Dr. Neena Bhatia<sup>3</sup>

**Objective**-Study aimed to evaluate the complementary feeding practices of mothers for infants and young children across three distinct socio economic settings.

## Methodology

**Study type**

Cross sectional

**Study area**

West Delhi

**Participants**

Mother-child dyads aged 6-23 months

**Sample size**

439

**Study duration:** March 2019- February 2020

## Results

Table 1: Complementary feeding practices across groups

Indicators	Urban slum n (%)	LIG n (%)	MIG n (%)	Pooled n (%)	p value
<b>Minimum dietary diversity (MDD) 6-23 months</b>	32 (21.3)	35 (23.3)	<b>44 (31.6)</b>	111 (25.3)	0.104
<b>Minimum meal frequency (MMF) 6-23 months</b>	40 (26.7)	54 (36.0)	<b>69 (49.6)</b>	163 (37.1)	< 0.001*
<b>Minimum acceptable diet (MAD) 6-23 months</b>	15 (10.0)	13 (8.7)	<b>23 (16.6)</b>	51 (11.6)	0.083

150 participants each in urban slum and LIG and 139 in MIG (due to covid)

## Categorization of households\*

### Middle income group (MIG)

• Government colonies, flats and co-operative societies were considered as MIG

### Low income group (LIG)

• LIG included resettlement colonies, one room flats, government colonies of class IV employees

### Urban slum

• Urban slum exhibited high population density, poor housing, multifamily latrine, poor drainage, and sewage facilities

**Ethical clearance:** Institutional Ethics Committee of Lady Irwin College, University of Delhi

**Socio demographic profile** – using a pretested questionnaire

**Tools & information collected**

**Complementary feeding practices**- WHO IYCF Indicators 2021, using a pretested questionnaire

➤ **Statistical analysis using STATA software (version 17)**

➤ **Value of p < 0.05 was considered as significant.**

## Implications

**Need targeted interventions** to bridge the dietary gaps among various income groups

**Strategic alignment** of existing guidelines with updated WHO 2021 IYCF indicators

**Unhealthy foods consumption** among children is emerging challenge-needs attention

**Behavior change interventions** must be intensified, utilizing suitable program platforms

**Sweet beverage consumption 6-23 months\*\***  
**53.1 %**

**Unhealthy food consumption 6-23 months\*\***  
**22.1 %**

**Zero vegetable or fruit consumption 6-23 months\*\***  
**68.3 %**

\*\* pooled data

➤ **Alarmingly low MDD, MMF & MAD in all income groups.**

➤ **~ 90 % children are nutrition hungry-suggested by MAD**

**Funding:** University Grants Commission (UGC), research Fellowship
